Contents of the Macro:	4

Screenshot of the document open with message to the user asking them to enable Macros displayed:

Screen shot of external application running after the Macros have been enabled:

Because the macro causes the computer to open Outlook, compose a message, and then automatically send it without user input I was unable to screenshot it in progress. This is a screenshot of the resulting email.

Contents of the Macro:

```
Sub OpenOutlookAndComposeEmail()  
    ' Open Outlook  
    OpenOutlook  
  
    ' Compose an email  
    Dim olApp As Object  
    Dim olMail As Object  
  
    ' Create Outlook Application object  
    Set olApp = CreateObject("Outlook.Application")  
  
    ' Compose an email  
    Set olMail = olApp.CreateItem(0) ' 0 represents olMailItem (Mail item)  
  
    ' Set recipient's email address  
    olMail.Recipients.Add "w0136969@nsc.ca"  
  
    ' Set subject  
    olMail.Subject = "Macro Boss"  
  
    ' Set body  
    olMail.Body = "I'm not a player I just crush a lot"  
  
    ' Send the email  
    olMail.Send  
End Sub  
  
Sub OpenOutlook()  
    ' Define the command to open Outlook  
    Dim command As String  
    command = "outlook.exe"  
  
    ' Run the command to open Outlook  
    Shell command, vbNormalFocus  
End Sub  
  
Sub AutoOpen()  
    ' Open Outlook and compose email  
    OpenOutlookAndComposeEmail  
End Sub
```
